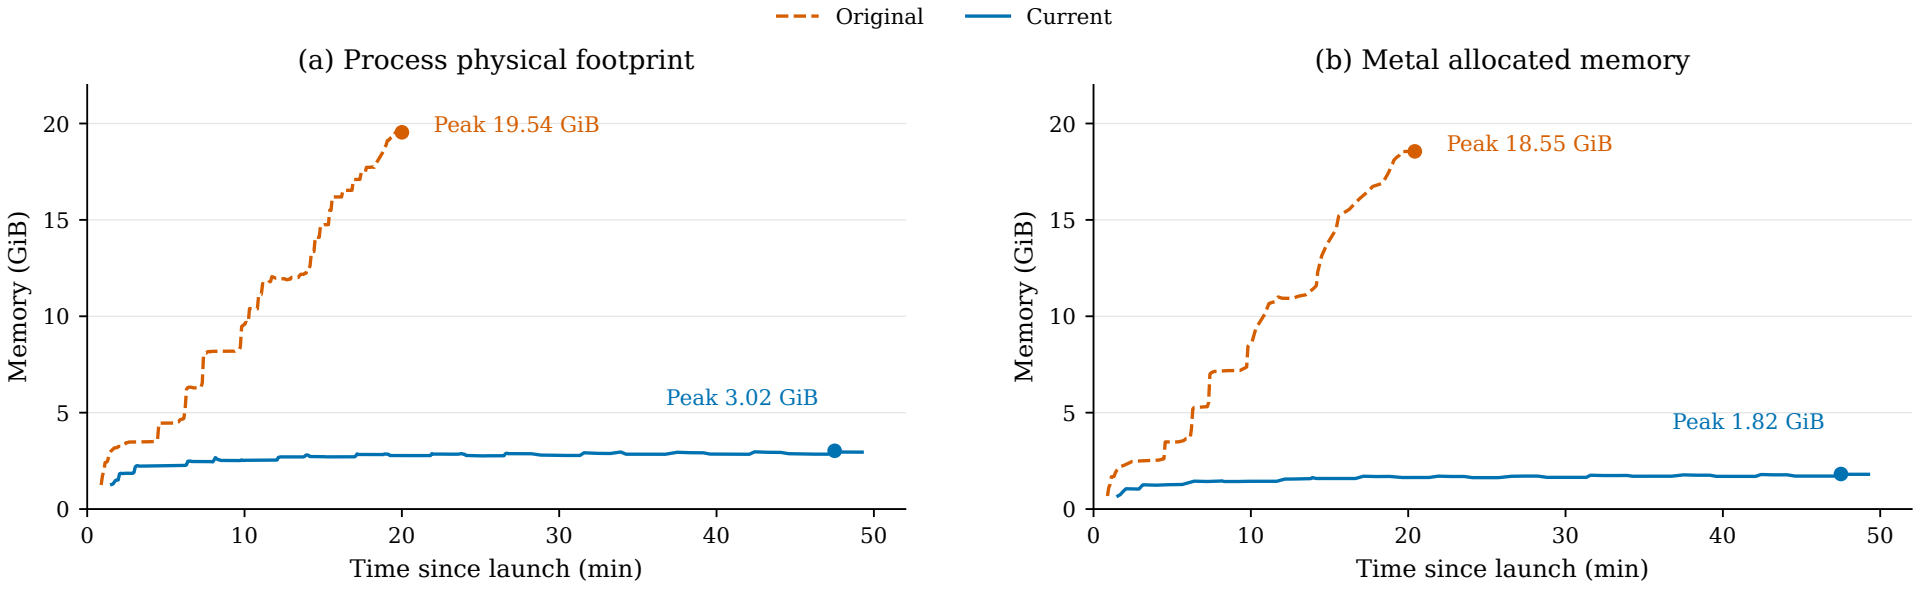
Memory optimization: original and current builds

Super Mario Bros. Wonder 1.2.1 | Apple M5 Pro, 48 GB | macOS 27.0

Original: 1617f38535db (20.4 min) Current: 968a4f053bda (50.0 min)



Independent sessions with different routes, inputs and durations; observed peaks are not paired A/B effect sizes.

Curves end at the last observation; no extrapolation. Both panels start at zero; memory metrics overlap.

Current shared texture retention still grows. This comparison makes no FPS or five-hour stability claim.
